- Common Types of Medical Malpractice

Medical Malpractice Lawsuits Healthcare providers — including doctors, surgeons, anesthesiologists, and nurses — have a professional and legal obligation to perform their duties according to a professionally accepted standard of care. If a medical practitioner fails to meet this standard of care, and an injury or death results from this negligence, the victim or the victim's family can file a medical malpractice lawsuit against the liable party. It is important to note, however, that medical science is not exact and not all injuries or deaths that occur while in the care of a healthcare provider are the result of medical malpractice. There are inherent risks involved with modern surgical techniques, and it must be proven that an injury or death resulted from a healthcare provider's failure to perform his or her duties to the accepted standard of care.

A Sarasota-area lawyer handling medical malpractice cases from Lutz, Bobo & Telfair, P.A., can review your case and help determine the best way to proceed with your claim. We can establish who the liable parties are and devise a customized strategy to strive to ensure that you obtain the compensation you are legally entitled to. If you need to file a medical malpractice or wrongful death claim, you can depend on our attorneys for sound legal counsel.

Common Types of Medical Malpractice If you or a loved one has suffered as a result of any one of the following examples of medical negligence, it may be grounds for a medical malpractice lawsuit. A Sarasota and Bradenton-area attorney handling medical malpractice cases from our law firm can help you file a claim to strive to ensure the liable parties are held accountable for their egregious actions.

- **Misdiagnosis** — A misdiagnosis can take the form of a wrong diagnosis, a delayed diagnosis, or a wrong diagnosis of a condition's subtype. Any failure in properly diagnosing an ailment can put a patient at severe risk for further injury or even death. If you were misdiagnosed by a healthcare provider and suffered further injury as a result, we can call upon medical witnesses to testify regarding the defendant's actions. If the misdiagnosis was a result of negligence, the defendant can be liable for damages.

- **Surgical Errors** — If a surgeon makes a mistake during the course of his or her duties, it can have catastrophic results, including permanent injury or even death. Surgical errors can result in medical tools being left inside of the body, perforations to vital organs and arteries, and even the amputation of the wrong limb. If you or someone you love has suffered because of a surgical error, we can help.

- **Anesthesia Error** — An incorrect dosage by an anesthesiologist can likely be grounds for a medical malpractice lawsuit, as anesthesiologists specialize in administering drugs to patients. An error by an anesthesiologist can be deadly, and any failure by an anesthesiologist to abide by the standard of care cannot be tolerated.

- **Medication Error** — If a doctor prescribes a patient an incorrect dosage of medication or a medication that may have an adverse effect with drugs the patient is already taking, and a patient suffers injury or death as a result, it may be possible to file a medical malpractice lawsuit.

You can rely on our competent and experienced team for legal guidance if you or someone you love has suffered at the hands of a negligent healthcare provider. We are committed to protecting victims' rights, and we will work tirelessly and strive to see that the liable parties are held accountable for their actions.
